concrete resurfacing

New Designer Architectural Paving Colours for contemporary homes, buildings & streetscapes

Designer

Architectural colour range

concrete resurfacing

New designer architectural colour range for concrete resurfacing will complement the very latest exterior paint finishes or modern brick masonry. It simply is a stunning choice for paving or concrete floor renovations.

About designer concrete resurfacing.

Designer concrete resurfacing is a spray-on method that uses proven engineered cement technology to produce a decorative wear layer on the surface of hardened concrete pavements or floors. Modern colours, design style and durability are features of the finished work.

Ideal for driveways, footpaths, patios and floors.

Where plain concrete exists in good condition and you wish to change its outdated appearance, the surface can be given a brand new image. Choose from a myriad of designer colour options. Select from a wide range of brick, tile or stone pattern stencils to create the look you want. Use special filament tape to make large symmetrical paving blocks or tiles; add personal features like company logos or artistic designs with custom manufactured stencils.

community recreation facilities use designer concrete resurfacing.

Slip resistance requirements of new pedestrian surfaces especially around public swimming pools and community precincts must be of "low" risk of slipping when wet as stipulated within AS/NZS 4586 – 2003. Very low risk of slip hazard is a feature of Designer concrete resurfacing textured finishes. Other benefits are economy and low maintenance.

Hard wearing serviceability features for driveways, streetscapes, commercial pavements and floor applications.

Resistance to abrasion wear from vehicular and pedestrian traffic is a performance feature of Designer concrete resurfacing. It adds extra value to finished construction appearance, market appeal and community environment.

features & benefits — in brief:

- High performance durability.
- Excellent abrasion and skid resistance.
- Low maintenance.
- Product manufacture quality assurance – written warranty.
- Tested fit-for-purpose to relevant Australian/New Zealand Standards.
- 10-years proven application in residential, commercial and community construction projects.
- Experienced independent tradespersons referred on request. Obligation-free quotes arranged.
- Myriad of new designer colours. Popular tile, brick and stone paving patterns range. Practical custom stencil designs may be made to order.

product precautions & limitations.

Concrete cracks present in the existing substrate may only be filled using recognized crack filling methods and techniques that may or will not prevent the re-emergence of the present cracks or elsewhere future concrete cracks resulting from undue influence of in-service use and environment conditions. No guarantee is or can be given for concrete crack treatment and neither for the transfer of existing concrete cracks or otherwise through the resurface coating and intending customers must accept the same.

Designer Concrete Coatings Pty Ltd is the product manufacturer. Licensed or otherwise appropriately experienced contractors who apply the product are independent entities and bears responsibility for carrying out the work in a proper and workmanlike manner in accordance with the product specifications and its precautions and limitations of use. Designer Concrete Coatings Pty Ltd accepts no liability for workmanship or improper application of the product and neither for abuse of in-service product use or undue influence of environment conditions.

Raw materials used in the manufacture of Designer Resurfacing Colour products are derived from natural sources and no guarantee is or can be given for colour shading variances from displayed colour samples or in different production batches from time to time and intending customers must accept the same.
